

# Solinteg Parallel Connection Solution

INTEGRATE SOLAR INTELLIGENTLY

# Brief Introduction

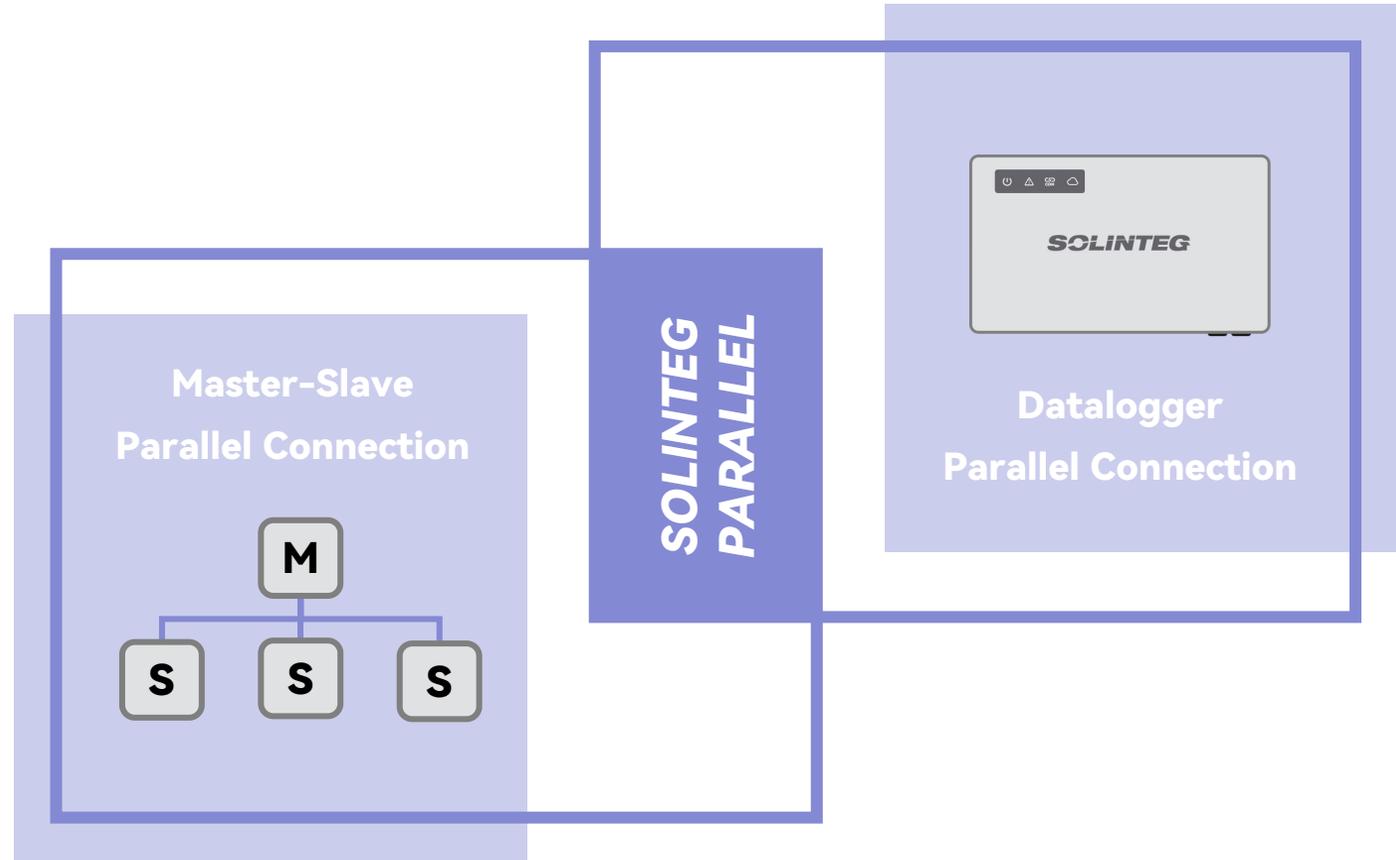

Solinteg provides two methods of parallel connection: Master-Slave Parallel and Datalogger Parallel. These are suitable for all Solinteg inverters and can be utilized in both on-grid and off-grid\* scenarios (off-grid parallel connection is only available for MHT 25-50K), enabling our customers to expand their system capacity and easily integrate other devices.

1

Master-Slave Parallel Connection

2

Datalogger Parallel Connection

\*: Off-grid parallel connection will be released at the end of Q2 2024.

# Master-Slave Parallel

Solinteg Master-Slave parallel connection can be used for all hybrid inverter, which supports both on-grid side and off-grid side\* paralleling (off-grid parallel connection is only available for MHT 25-50K). Besides, it has the following highlights:

On-grid Parallel Connection

Off-grid Parallel Connection

Seamless Switching

Monitor All in One

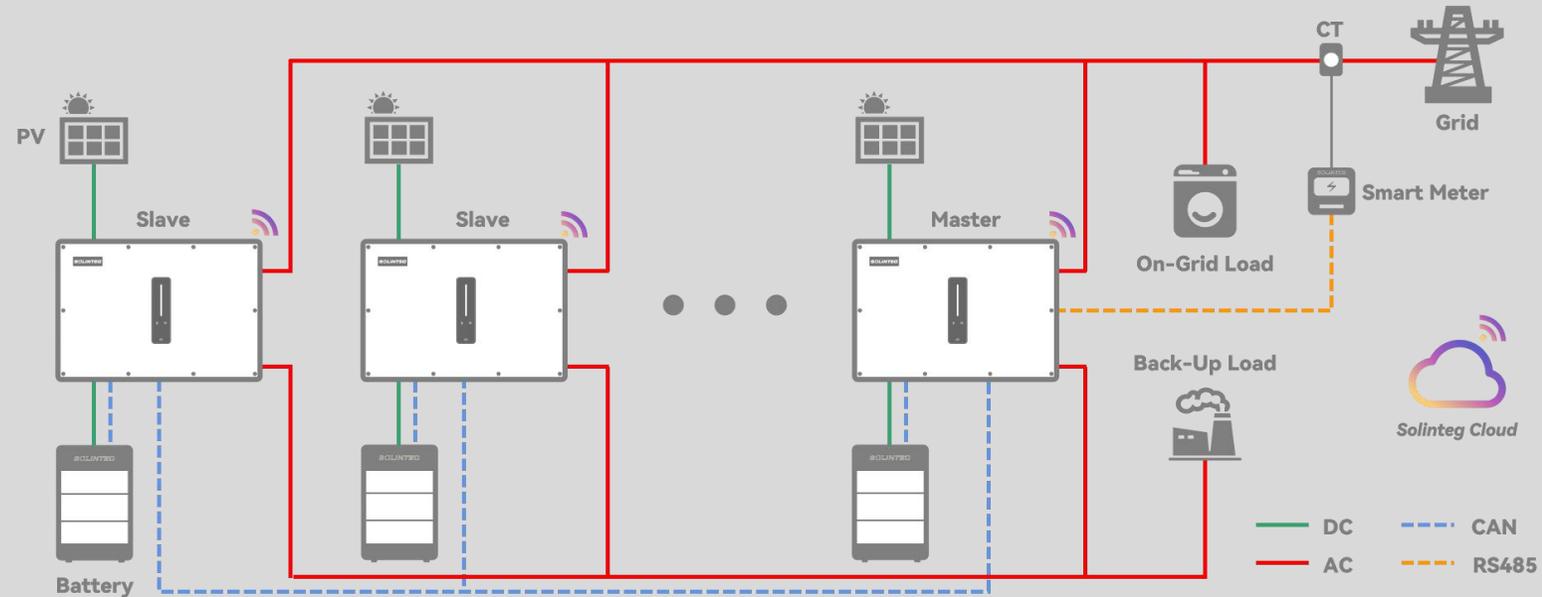

System Level Precise Export Control

System Level Unbalanced Output

\*: Off-grid parallel connection will be released at the end of Q2 2024.

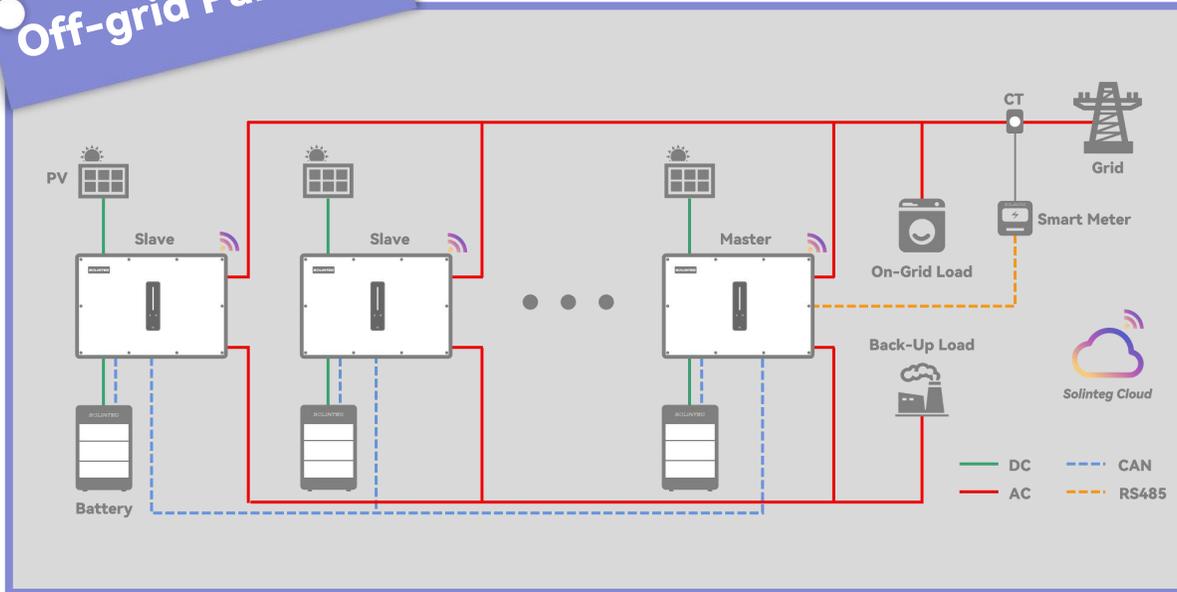

## Solinteg Master-Slave Parallel Connection

# Master-Slave Parallel

Typical Applications

## Off-grid Parallel\*

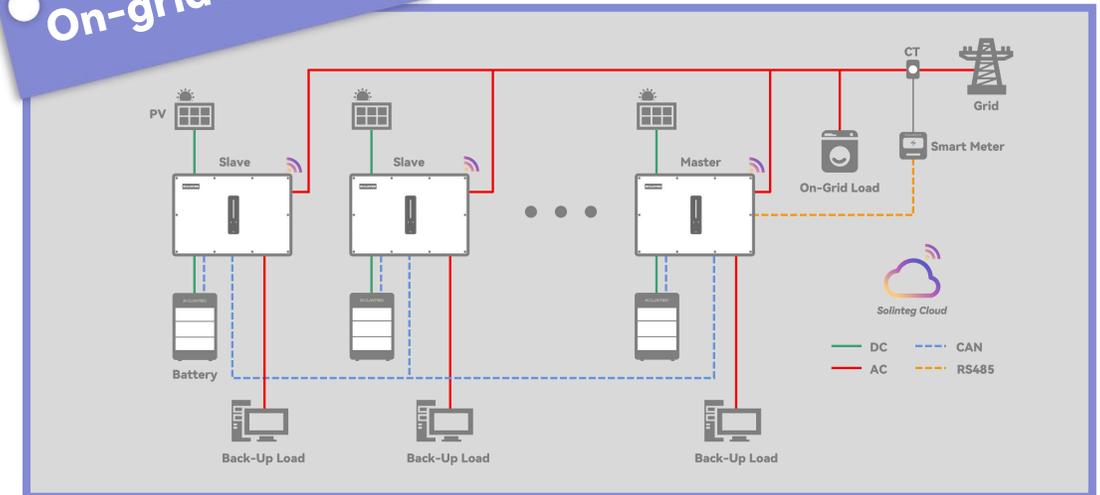

## Greater Loads Carrying Ability

Share the PV and battery power to support more loads

## Higher Flexibility

More flexible to expand the system and allocate the loads

## On-grid Parallel

\*: Off-grid parallel connection is only available for MHT25-50K and it will be released at the end of Q2 2024.

# Datalogger Parallel

*Solinteg datalogger parallel increases the number of parallel units while maintaining the advantages of master-slave parallel, and integrates more intelligent control strategies into the datalogger, further enriching the functionality of the system.*

xN

More Units in One System

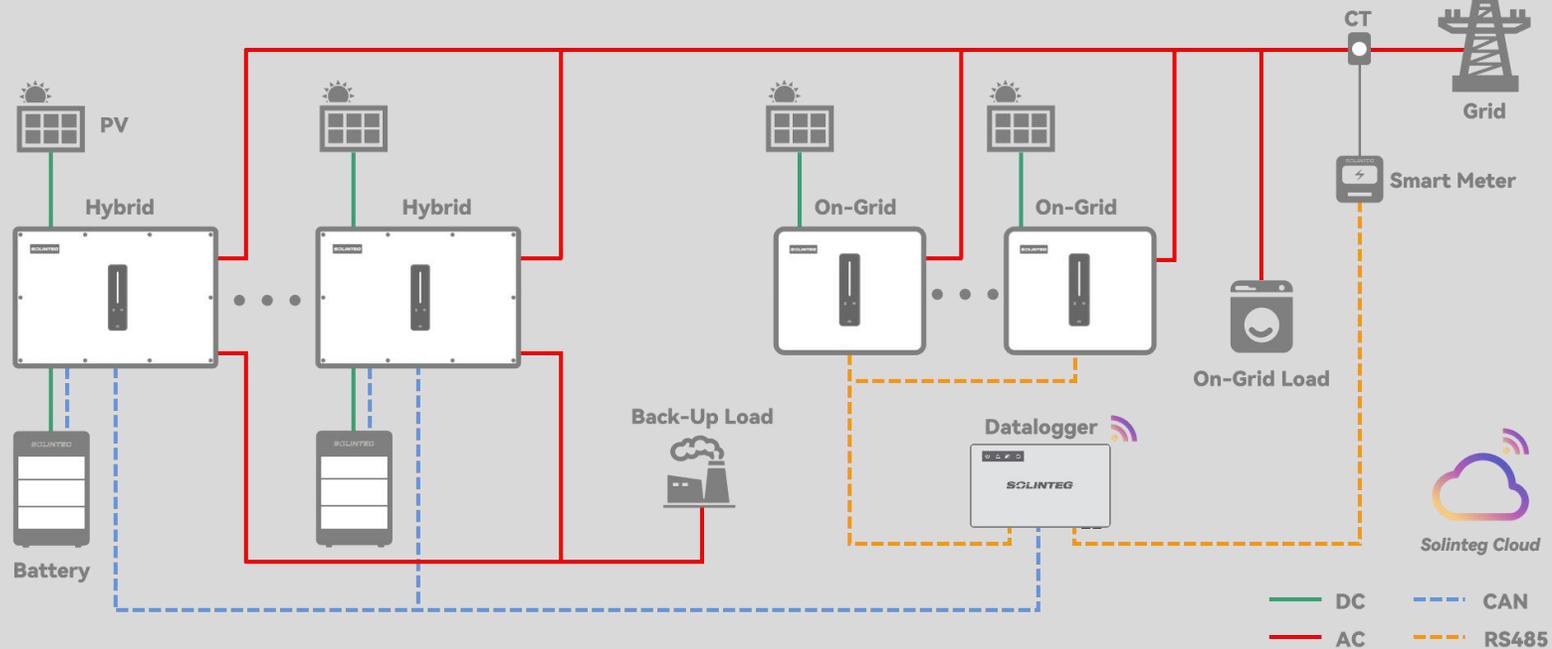

More Smart Strategies

More Integrations

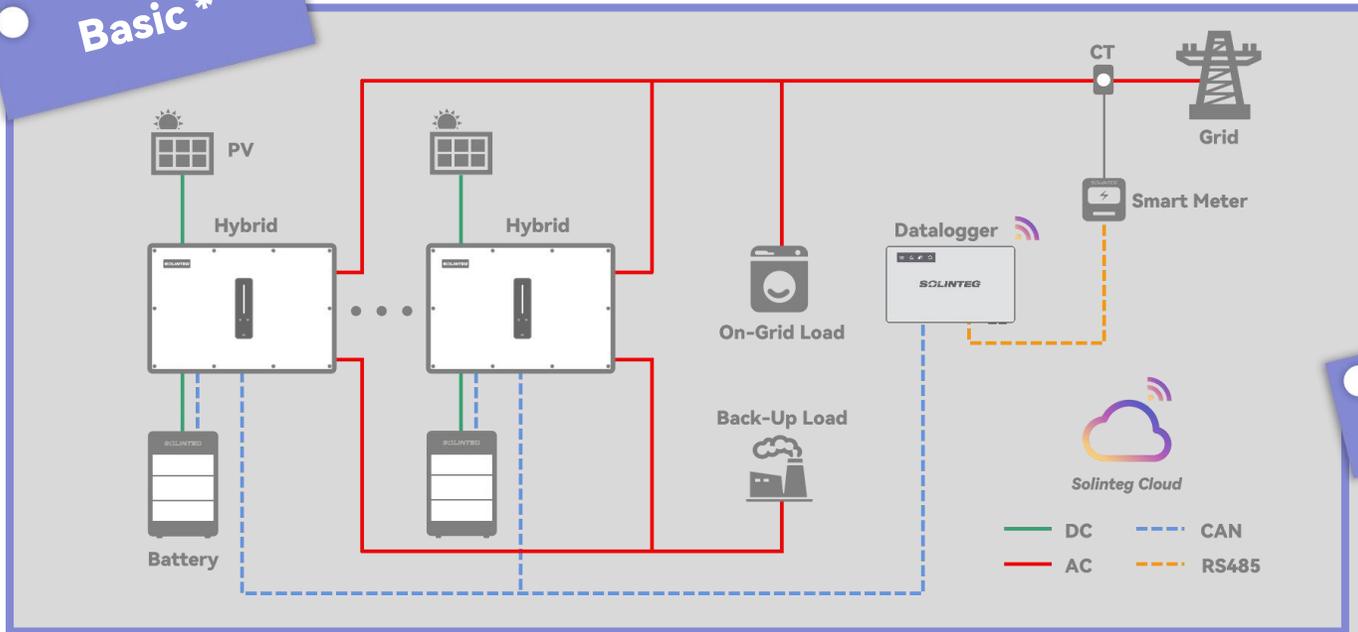

## Solinteg Datalogger Parallel Connection

# Datalogger Parallel

## Typical Applications

### Basic \*

### More Units

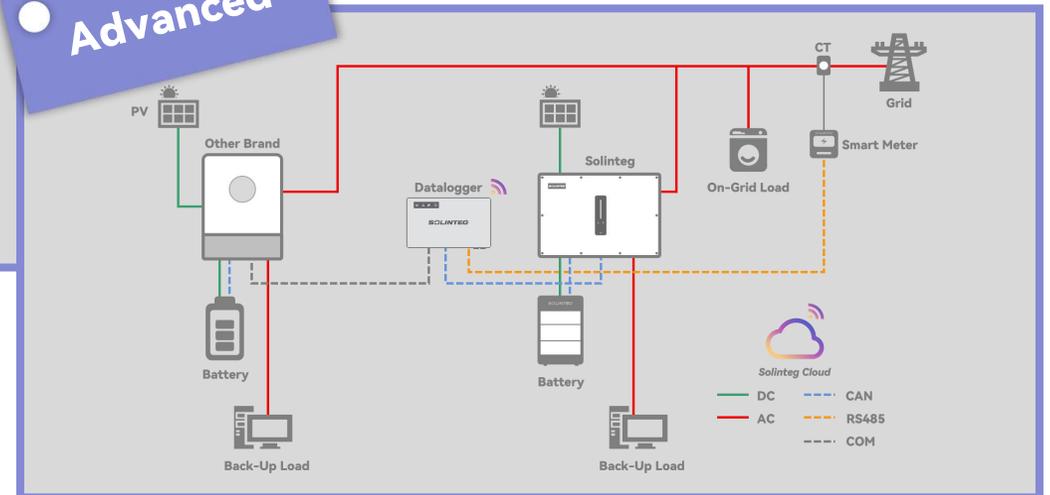

Datalogger supports 1 string CAN parallel and 3 strings RS485 parallel (10 hybrid and 30\*3 on grid paralleling)

### More Possibilities

More ports to integrate other devices and other brand inverters\* into one system

\*: The communication protocol of other brands inverter is needed.

### Advanced

\*: Off-grid parallel connection is only available for MHT25-50K and it will be released at the end of Q2 2024.
